

# 3 KEY FACTORS

**Recycling is one of the best ways to help protect our environment. There are three key factors when thinking about how to recycle – The 3 R's:**

**When we recycle we collect waste or used materials and reuse them to make new products. The items that are typically recycled are aluminium cans, glass bottles, paper, wood and plastic. There are three main steps in recycling. First we collect these items, then we prepare them into a material which we finally use to make new products.**

# RECYCLE-REUSE AND REDUCE

**Recycling** has numerous environmental advantages.

It is necessary to teach people which items are recyclable.

## What can we recycle MORE?

- Plastic
- Paper
- Glass
- Electronics
- Metals
- Organic materials
- Tires
- Clothes

# Why recycling waste material is important for the environment?

Pollution and environmental destruction is killing humans and the world we live in.

We have to do more to protect the planet. We must improve our recycling habits and produce less waste and recycle most of the waste material.

# WORKSHOP in SINOP

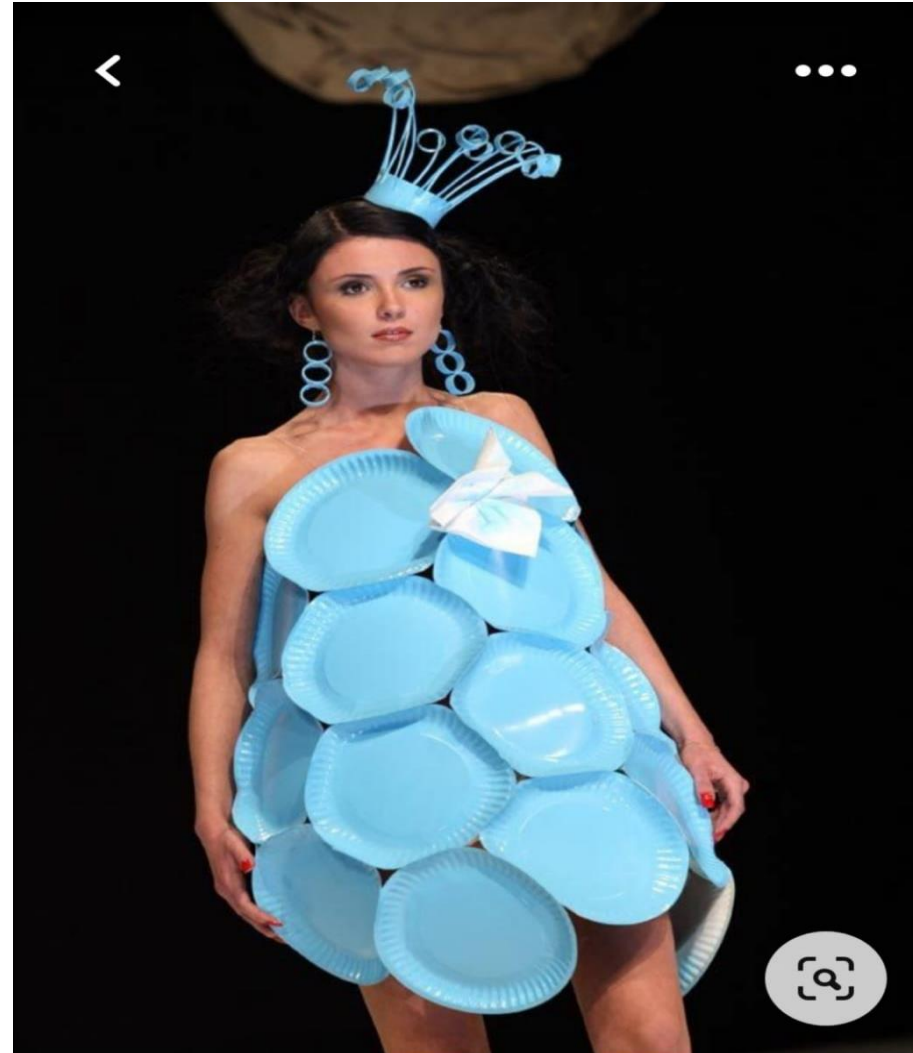

- During the Learning Teaching Training Activity in Sinop ,we are going to work with waste fabrics, old and ripped jeans, papers, plastics,yarns...etc.
- These are some possible ideas which will inspire you before our workshop.

BOBBINS -

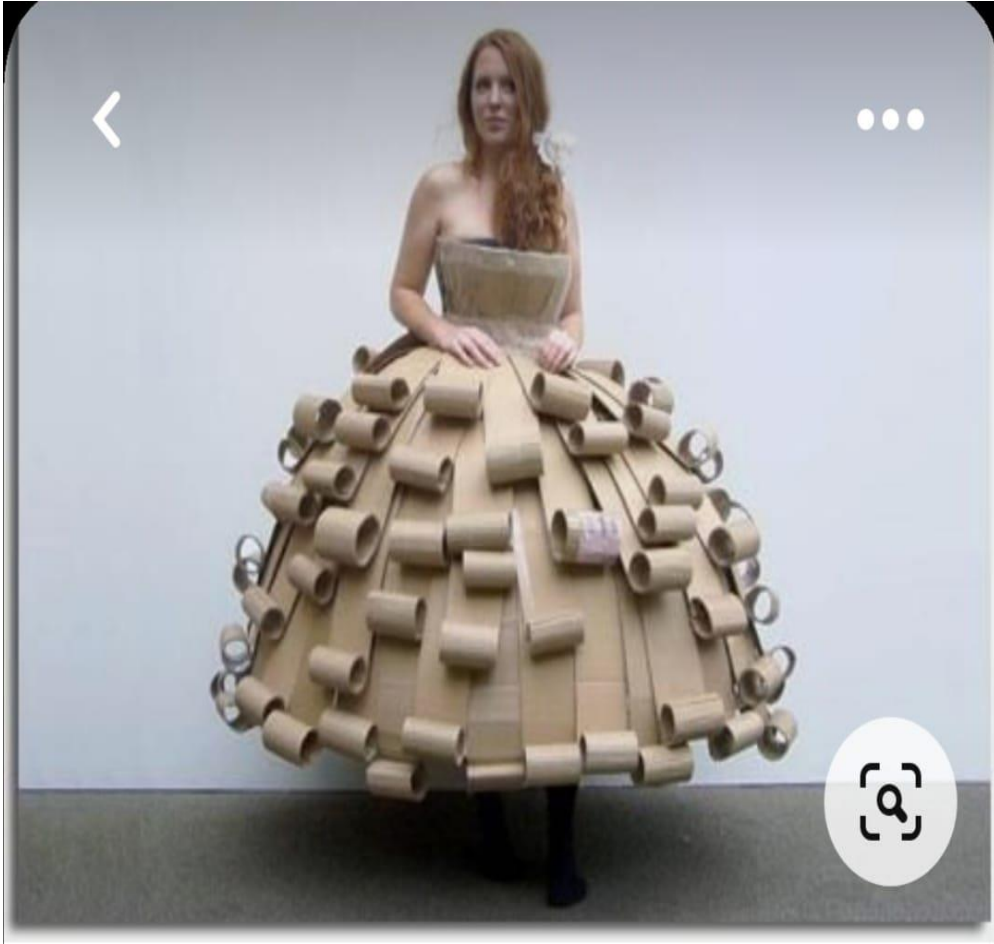

PLASTIC PLATES -

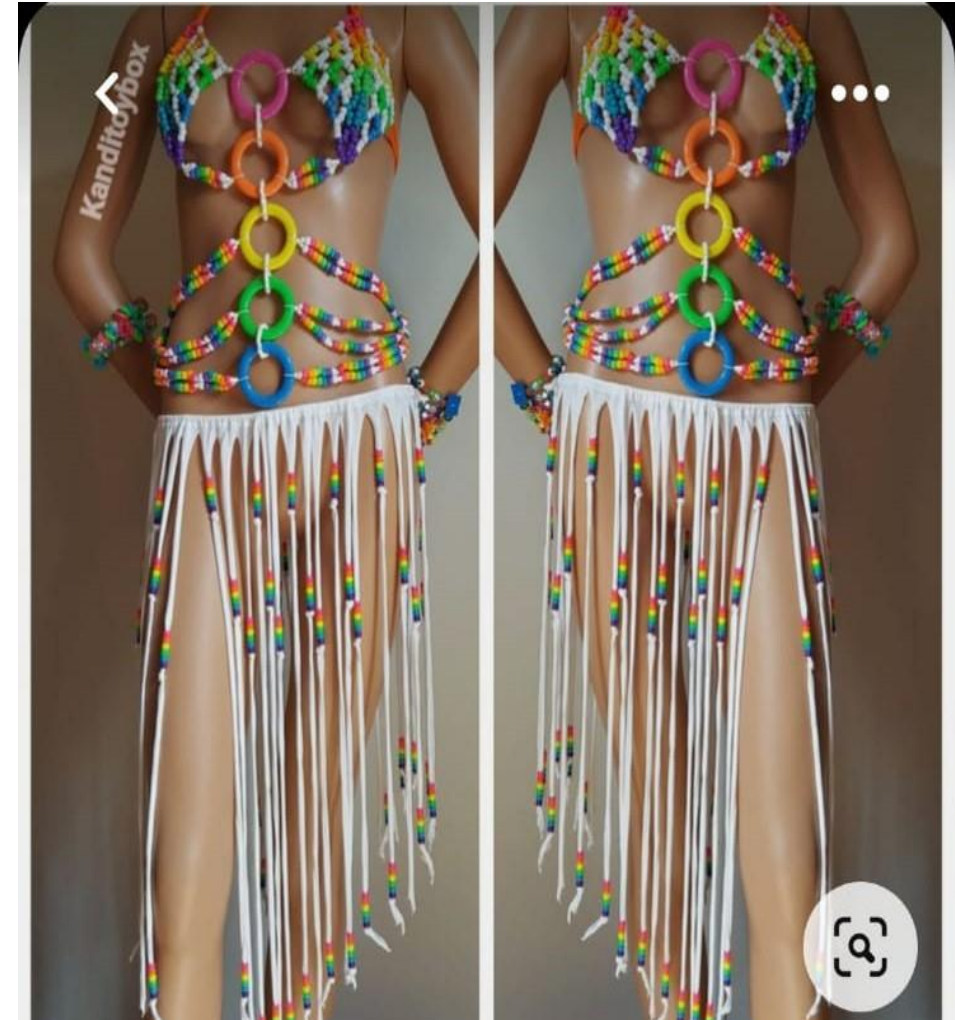

CANS

# PAPER TRAY FOR EGGS - TOLIET PAPER HOLDERS - NEWSPAPERS

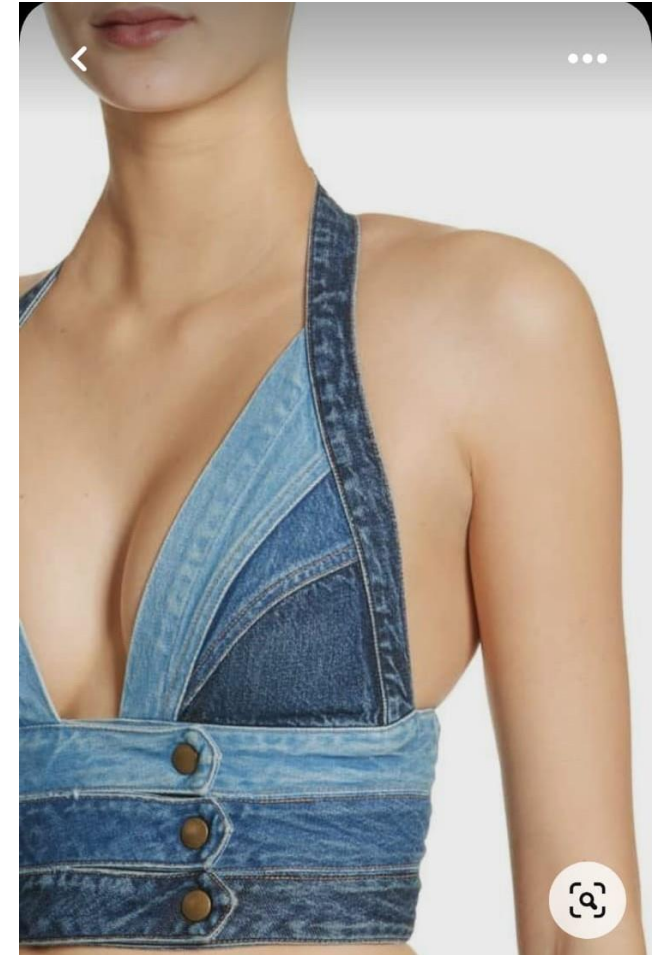

# CARTONS — WASTE FABRICS - YARNS

# REUSING JEANS IN DIFFERENT FORMS

# OLD AND RIPPED JEANS ARE REUSED

# JEANS — OLD MAGAZINES — BUTTONS

**THANK YOU FOR LISTENING**
